DELIVER
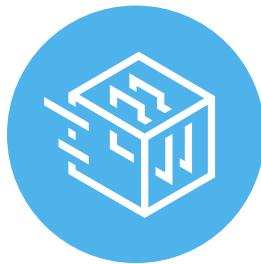

DELIVER provides everything you need to safely organise, package and share content with clients, customers, outside counsel and other internal and external groups. With DELIVER, you can create secure, sharable workspaces (similar to extranets or deal rooms), compile and organise content, and collaborate on document sets without worrying about security or governance. It's an efficient way to create and maintain a single source of truth for cases and projects, streamline governance and reduce the time and costs of compiling documents.
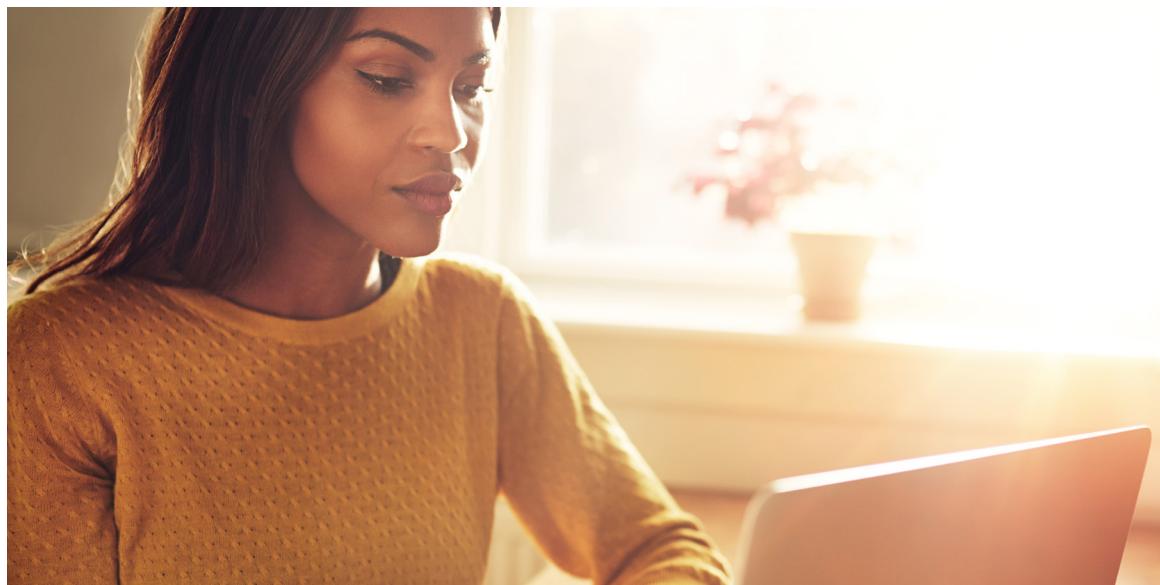

Add On Technology Options:

CollabSpaces

Share and collaborate naturally, securely and in a way that brings you and your customers' worlds closer together.

CollabSpaces makes it easy to securely share the content in your NetDocuments system with external users—without transferring it to a third-party file sharing service or extranet.

Because CollabSpaces is so easy to use, clients and colleagues can access and collaborate on content immediately—without extra time or training.

CollabSpaces also lets you invite an unlimited number of external clients and colleagues, so you never have to worry about licensing restrictions.

SetBuilder

Quickly organise documents into sets or binders and securely distribute compiled content to everyone who needs it.

SetBuilder brings standardised processes, streamlined workflows and fast service delivery to document compiling and distribution. With SetBuilder, you'll never spend hours in a closing room physically labeling and compiling printed documents.

As a result, organisations that use SetBuilder experience dramatic reductions in the hard costs associated with closings, saving an average of nearly €1,236 per transaction.

CollabSpaces

How do your teams collaborate and collect feedback on important documents? If they're typical, the document owner probably duplicates the file, sends it to a third-party cloud-based file sharing system, and then sends a link or attachment to reviewers. This process gets the job done, but it often leads to multiple, unsecured copies of documents and lots of wasted time exporting and importing documents between different systems.

CollabSpaces lets you skip all those headaches by creating secure, shareable workspaces within the matter you're working on. With CollabSpaces, colleagues and clients can access specific documents, provide feedback and approval, and even upload documents of their own—all within your secure NetDocuments system. This streamlines collaboration and governance and creates a seamless and simple review experience for clients and colleagues.

Share files without disrupting governance or security

- **Collaborate Within Your Workspaces**

  CollabSpaces is embedded within your NetDocuments workspace, so documents never leave the safety and control of the platform, they are always readily accessible, and they always stay connected to the matter.

- **Invite Unlimited External Users**

  Legal work is growing increasingly complex, which means more people need to review and collaborate on more documents. With CollabSpaces, you can invite unlimited users to collaborate on documents without worrying about licensing restrictions.

- **Maintain Security and Governance**

  Files added to a CollabSpace inherit the rules, governance, and retention policies set at the matter level in NetDocuments. Administrators can also maintain control of when and with whom files are shared—and monitor all current and past sharing activity.

Create a Single Source of Truth

CollabSpaces keeps your internal and external users connected to important documents, without given them access to everything in your matter. Within the secure Collabspaces extranet, you can share, edit, download and file documents using the same platform. Members can also participate in ndThread conversations to create a unified and secure single source of truth for all of your work.

SetBuilder

Sending a staff member to a closing room for hours (or sometimes days) to print, tag, organise, file and bind thousands of documents is still the norm for most firms, even though it costs a small fortune in labour and material.

SetBuilder provides a smarter alternative—with a modern, digitised 'closing room' that makes it possible to avoid those wasted expenses and save nearly €1,250 per transaction. With SetBuilder, you can take advantage of standardised processes, streamlined workflows and other capabilities to deliver services faster than ever.

Create document sets in record time

- **Reduce Hard Costs**
  Closing documentation can cost a fortune when you add up the labour and supplies required to produce and distribute printed sets of documents. SetBuilder saves time and money by digitising the entire process, erasing the need for any printed materials, and eliminating the need to spend time in closing rooms.

- **Standardise Your Processes**
  With SetBuilder, you can easily clone sets of documents to reduce planning time and standardise workflows across similar future transactions.

- **Streamline Work lows**
  SetBuilder lives directly in your NetDocuments workspace, so you can easily locate, search and collaborate on sets without ever printing or downloading a document. Setbuilder even lets you create document placeholders that act as convenient to-do lists until documents are finalised and added to sets.

- **Deliver Work Faster**
  After you use SetBuilder to create a document set, you can easily create a hyperlinked PDF or structured ZIP file for fast, convenient digital delivery to the client.

Save Money, Time, and Sanity

SetBuilder provides the fast, modern "closing room" update your organisation has been waiting for. With SetBuilder, your teams will never spend hours in a closing room physically compiling and labeling documents. Instead, they'll have time to focus on the next high-priority tasks, so your team can always deliver the best possible legal outcomes.

netdocuments®

When you don't have to put air quotes around "working from home."

That's Work Inspired

You need tools that help you create and maintain a complete repository for matters, streamline governance, and reduce the time and costs of compiling documents—all while still providing you with the flexibility to share content with internal and external groups.

DELIVER provides everything your teams need to create secure, sharable workspaces (similar to extranets or deal rooms), compile and organise content and collaborate on document sets without worrying about security or governance.

Give your teams the tools they need to *Work Inspired*.
